- Understand how to develop an emergence profile and develop or maintain the papilla
- Understand how to develop communication skills of your implant team with patient, surgeon, laboratory

Dr. Brent Ludens maintains a full-time practice limited to prosthodontics, emphasizing cosmetic, reconstructive, and implantdentistry. He utilizes all techniques of cosmetic, prosthetic, and implant dentistry for the esthetic oral rehabilitation of his patients. Dr. Ludens has witnessed the evolution of implant dentistry, from when implant integration was the only goal and esthetic considerations were an afterthought. Today, the esthetic implant is a reality and can be indistinguishable from the natural tooth. Techniques and materials have evolved to help all members of the implant team predictably provide esthetic implant restorations forpatients. Dr. Ludens is committed to providing a step-by-step program to help make this process predictable as well as practical. For over 15 years, Dr. Ludens has lectured nationally on dental implants and prosthodontics to experienced practitioners. He is a member of the American College of Prosthodontists, the American Dental Association, and the Iowa Dental Association.
